

**Build mold protection
into your home.**

MOLD-RAM

Protection means security.

Think of mold protection as a security system. It can't prevent theft of your possessions, but it can protect more important things like your health, the air you breathe and the investment you have in your home.

You can run, but you can't hide. Because mold spores are virtually everywhere. In some situations they are harmless, but when the right combination of moisture, temperature and humidity comes together, spores become mold. And that's when things get ugly.

security

Secure your investment.

Managing the environmental factors that cause mold will always be essential. But treatment with the highly-effective mold prevention product MOLD-RAM™ is just as critical. The best time to have MOLD-RAM applied is during new home construction, when building materials are exposed and can be readily protected with this proven mold prevention solution.

Mold prevention with MOLD-RAM entails a basic surface treatment by a trained professional. It's a simple procedure. One you will never regret. Because when it comes to mold, the best option – by far – is prevention. Ridding a home of existing mold, on the other hand, is an invasive, time-consuming, labor-intensive process. Not to mention expensive. The old adage, "An ounce of prevention is worth a pound of cure." has never been more true than it is with mold management.

Applied at time of construction, or to appropriate areas of existing structures, MOLD-RAM provides long-residual mold and mildew prevention on wood, wallboard, concrete and masonry. Generally, one easy treatment is all that is required. MOLD-RAM can also be used as a long-term preventative product in conjunction with mold remediation programs.

The number one job of MOLD-RAM is to prevent mold. But in reality, it does so much more. It protects your investment, secures the integrity of your home . . . and gives you peace of mind.

investment

Nothing to sneeze at.

In recent years, the relationship between indoor air quality and health has garnered much attention. And for good reason. Statistics indicate a majority of our population spends 90% of their lifetime indoors. And the number of people suffering from asthma and allergies continues to climb. Mold is one likely culprit.

In addition to the suspected health issues, the presence of mold can damage your home and create problems at resale. That's why preventing mold with EPA-approved MOLD-RAM is so important. It safeguards your family and helps maintain your property value. MOLD-RAM is the new foundation for a happy, healthy home.

healthy home

Mold protection with MOLD-RAM is like a breath of fresh air. It protects your family, safeguards your home and secures your investment. Nothing could be more important.

Trusted chemistry. Proven protection.

Another beautiful thing about MOLD-RAM is its reputation. It contains one of the world's most respected anti-fungal compounds. One that farmers have relied on to protect their crops – and your food – for nearly 40 years. Asparagus, carrots, corn, potatoes, melons and peanuts – just to mention a few. It is also used as a paint additive, to preserve raw lumber and to protect golf course putting greens from disease.
